About The NCS™

The National Community Survey™ (The NCS™) report is about the “livability” of Corona. A livable community is a place that is not simply habitable, but that is desirable. It is not only where people do live, but where they want to live. The survey was developed by the experts from National Research Center at Polco.

Great communities are partnerships of the government, private sector, community-based organizations and residents, all geographically connected. The NCS captures residents’ opinions considering ten central facets of a community:

- Economy
- Mobility
- Community Design
- Utilities
- Safety
- Natural Environment
- Parks and Recreation
- Health and Wellness
- Education, Arts, and Culture
- Inclusivity and Engagement

The report provides the opinions of a representative sample of 714 residents of the City of Corona collected from May 16th, 2022 to August 17th, 2022. The margin of error around any reported percentage is 4% for all respondents and the response rate for the 2022 survey was 10%. Survey results were weighted so that the demographic profile of respondents was representative of the demographic profile of adults in Corona.

How the results are reported

For the most part, the percentages presented in the following tabs represent the “percent positive.” Most commonly, the percent positive is the combination of the top two most positive response options (i.e., excellent/good, very safe/somewhat safe, etc.). On many of the questions in the survey respondents may answer “don’t know.” The proportion of respondents giving this reply is shown in the full set of responses included in the tab “Complete data.” However, these responses have been removed from the analyses presented in most of the tabs. In other words, the tables and graphs display the responses from respondents who had an opinion about a specific item.

Comparisons to benchmarks

NRC’s database of comparative resident opinion is comprised of resident perspectives gathered in surveys from over 600 communities whose residents evaluated the same kinds of topics on The National Community Survey. The comparison evaluations are from the most recent survey completed in each community in the last five years. NRC adds the latest results quickly upon survey completion, keeping the benchmark data fresh and relevant. The communities in the database represent a wide geographic and population range. In each tab, Corona’s results are noted as being “higher” than the benchmark, “lower” than the benchmark, or “similar” to the benchmark, meaning that the average rating given by Corona residents is statistically similar to or different (greater or lesser) than the benchmark. Being rated as “higher” or “lower” than the benchmark means that Corona’s average rating for a particular item was more than 10 points different than the benchmark. If a rating was “much higher” or “much lower,” then Corona’s average rating was more than 20 points different when compared to the benchmark.

The survey was administered during the COVID-19 pandemic, a time of challenge for many local governments. While we provide comparisons to national benchmarks, it is important to note that much of the benchmark data was collected prior to the pandemic. This may impact how your City’s 2022 ratings compare to other communities’ ratings from the past five years.

Methods

Selecting survey recipients

All households within the City of Corona were eligible to participate in the survey. A list of all households within the zip codes serving Corona was purchased from Go-Dog Direct based on updated listings from the United States Postal Service. Since some of the zip codes that serve the City of Corona households may also serve addresses that lie outside of the community, the exact geographic location of each housing unit was compared to community boundaries using the most current municipal boundary file. Addresses located outside of the City of Corona boundaries were removed from the list of potential households to survey. Each address identified as being within city boundaries was further identified as being within one of the five districts. From that list, addresses were randomly selected as survey recipients, with multi-family housing units (defined as those with a unit number) sampled at a rate of 5:3 compared to single family housing units.

An individual within each household was selected using the birthday method. The birthday method selects a person within the household by asking the “person whose birthday has most recently passed” to complete the questionnaire. The underlying assumption in this method is that day of birth has no relationship to the way people respond to surveys. This instruction was contained in the introduction of the survey.

Conducting the survey

The 7,000 randomly selected households received mailings beginning on May 16th, 2022 and the survey remained open for 14 weeks. The first mailing was a postcard inviting the household to participate in the survey. The next mailing contained a cover letter with instructions, the survey questionnaire, and a postage-paid return envelope. An additional survey packet (containing a cover letter, questionnaire, and return envelope) was sent to 2,000 households randomly selected from the original survey participants. All mailings included a web link to give residents the opportunity to respond to the survey online. All follow-up mailings asked those who had not completed the survey to do so and those who had already done so to refrain from completing the survey again.

The survey was available in English and Spanish. All mailings contained paragraphs in both languages instructing participants on how to complete the survey in their preferred language.

About 2% of the 7,000 mailed invitations or surveys were returned because the household address was vacant or the postal service was unable to deliver the survey as addressed. Of the remaining 7,000 households that received the invitations to participate, 714 completed the survey, providing an overall response rate of 10%. The response rate was calculated using AAPOR’s response rate #2* for mailed surveys of unnamed persons.

It is customary to describe the precision of estimates made from surveys by a “level of confidence” and accompanying “confidence interval” (or margin of error). A traditional level of confidence, and the one used here, is 95%. The 95% confidence interval can be any size and quantifies the sampling error or imprecision of the survey results because some residents’ opinions are relied on to estimate all residents’ opinions. The margin of error for the City of Corona survey is no greater than plus or minus 4 percentage points around any given percent reported for all respondents (714 completed surveys).

In addition to the randomly selected “probability sample” of households, a link to an online open participation survey was publicized by the City of Corona. The open participation survey was identical to the probability sample survey with two small updates: it included a map at the beginning asking where the respondent lives and a question about where they heard about the survey. The open participation survey was open to all city residents and became available on June 20th, 2022. The survey remained open for 8 weeks. The data presented in the following tabs exclude the open participation survey data, but a tab at the end provides the complete frequency of responses to questions by the open participation respondents.

Analyzing the data

Responses from mailed surveys were entered into an electronic dataset using a “key and verify” method, where all responses are entered twice and compared to each other. Any discrepancies were resolved in comparison to the original survey form. Range checks as well as other forms of quality control were also performed. Responses from surveys completed on Polco were downloaded and merged with the mailed survey responses.

The demographics of the survey respondents were compared to those found in the 2010 Census and 2020 American Community Survey estimates for adults in the City of Corona. The primary objective of weighting survey data is to make the survey respondents reflective of the larger population of the community. The characteristics used for weighting were age, sex, race, Hispanic origin, housing type, housing tenure, and area. No adjustments were made for design effects. Weights were calculated using an iterative, multiplicative raking model known as the ANES Weighting Algorithm.* The results of the weighting scheme for the probability sample are presented in the following table.

NRC aligns demographic labels with those used by the U.S. Census for reporting purposes, when possible. Some categories (e.g., age, race/Hispanic origin, housing type, and length of residency) are combined into smaller subgroups.

		Unweighted	Weighted	Target*
Age	18-34	6%	28%	33%
	35-54	33%	40%	37%
	55+	61%	31%	29%
Area	Area 1	17%	19%	19%
	Area 2	15%	21%	21%
	Area 3	19%	17%	17%
	Area 4	24%	20%	21%
	Area 5	24%	23%	22%
Hispanic origin	No, not Spanish, Hispanic, or Latino	76%	56%	56%
	Spanish, Hispanic, or Latino	24%	44%	44%
Housing tenure	Own	82%	64%	64%
	Rent	18%	36%	36%
Housing type	Attached	22%	33%	33%
	Detached	78%	67%	67%
Race & Hispanic origin	Not white alone	48%	64%	66%
	White alone, not Hispanic or Latino	52%	36%	34%
Sex	Man	44%	46%	50%
	Woman	56%	54%	50%
Sex/age	Man 18-34	2%	11%	18%
	Man 35-54	14%	20%	18%
	Man 55+	28%	15%	14%
	Woman 18-34	3%	16%	16%
	Woman 35-54	19%	21%	19%
	Woman 55+	34%	16%	15%

The survey datasets were analyzed using all or some of a combination of the Statistical Package for the Social Sciences (SPSS), R, Python, and Tableau. For the most part, the percentages presented in the reports represent the “percent positive.” The percent positive is the combination of the top two most positive response options (i.e., excellent/good, very safe/somewhat safe, essential/very important, etc.), or, in the case of resident behaviors/participation, the percent positive represents the proportion of respondents indicating “yes” or participating in an activity at least once a month.

On many of the questions in the survey respondents may answer “don’t know.” The proportion of respondents giving this reply is shown in the full set of responses included in the tab “Complete data”. However, these responses have been removed from the analyses presented in the reports. In other words, the tables and graphs display the responses from respondents who had an opinion about a specific item.

Contact

The City of Corona funded this research. Please contact Donna Finch of the City of Corona at donna.finch@coronaca.gov if you have any questions about the survey.

Highlights

Residents appreciate the City's natural environment and recreational opportunities but identify some room for growth.

About 6 in 10 survey participants positively rated the quality of Corona's natural environment and parks and recreation opportunities. Over half gave high marks to the city's fitness opportunities, recreation programs or classes, recreation centers or facilities, and the availability of paths and walking trails, all of which were on par with national benchmark comparisons. Services like yard waste pick-up (74% excellent or good), recycling (61%) and the preservation of natural areas (55%) also received positive scores similar to those observed in other communities across the nation. However, some items in these facets fell below national averages. City parks (65%), recreational opportunities (52%), and cleanliness of Corona (50%) scored lower than national benchmarks. Community members also identified room for growth in Corona's open space and air quality, with only about 4 in 10 rating each favorably.

Safety is an important area of focus for the community.

Safety is a top priority for Corona's residents, with 97% rating it an essential or very important focus area for the city in the next two years. More than 8 out of 10 residents reported feeling safe in their neighborhood during the day, and three-quarters felt safe from fire, flood, and natural disasters. These scores are on par with national benchmark communities. However, only about half of survey participants gave favorable reviews for the overall feeling of safety in Corona, lower than the national average. A similar proportion of respondents reported feeling safe in Corona's downtown/commercial area during the day, much lower than ratings given in comparison communities. Additionally, residents' feelings of safety from violent crime (58% very or somewhat safe) and property crime (48%) were also lower than in other communities across the nation. In addition to the standard survey questions, the City asked a few custom questions pertaining to safety. Nearly 6 in 10 residents positively rated public safety efforts in Corona, and about 80% felt they are very or somewhat prepared in the event of an emergency.

Economy is a priority for Corona.

When asked about which aspects of the community the City should focus on in the next two years, 9 in 10 respondents identified the overall economic health as an area of priority. About half of the respondents gave positive ratings to the quality of Corona's overall economic health and to Corona as a place to work; these scores were similar to the national benchmark communities. Almost 6 in 10 residents were pleased with the quality and variety of business and service establishments. Evaluations for shopping opportunities (45% excellent or good), employment opportunities (37%), and the cost of living (30%) were all on par with the counterparts across the nation. However, a few items received less favorable reviews, indicating opportunities for additional focus. When asked to rate Corona as a place to visit, one-third of survey participants gave positive marks, lower than the national average. Additionally, only one-quarter of respondents positively rated the vibrancy of the city's downtown/commercial area, a score much lower than the comparison communities.

Residents appreciate Corona's utility infrastructure.

Two-thirds of respondents rated the city's utility infrastructure positively. Additionally, 90% of survey participants indicated that the quality of Corona's utilities was an essential or very important area of focus for the next two years. All survey items within this facet of livability received scores on par with national and peer comparison groups. Highest-rated items included garbage collection (75%), sewer services (71%), storm water management (68%), and power utility (67%). About 6 in 10 respondents also gave excellent or good marks to utility billing services. In a question unique to Corona, residents were asked about their likelihood of using an improved online utility customer portal for service requests, usage data, and payment history; nearly 90% of the respondents said they would be very or somewhat likely to use this service if provided by the City.

Facets of livability

Resident perceptions of quality and importance for each of the facets of community livability provide an overview of community strengths and challenges that are useful for planning, budgeting and performance evaluation. The charts below show the proportion of residents who rated the community facets positively for quality and the priority (importance) placed on each. Also displayed is whether local ratings were lower, similar, or higher than communities across the country (the national benchmark).

Please rate each of the following characteristics as they relate to Corona as a whole.
 (% excellent or good)

		vs. benchmark*
Overall economic health	57%	Similar
Overall quality of the transportation system	41%	Similar
Overall design or layout of residential and commercial areas	57%	Similar
Overall quality of the utility infrastructure	66%	Similar
Overall feeling of safety	54%	Lower
Overall quality of natural environment	60%	Lower
Overall quality of parks and recreation opportunities	67%	Similar
Overall health and wellness opportunities	55%	Similar
Overall opportunities for education, culture, and the arts	49%	Similar
Residents' connection and engagement with their community	38%	Similar

Please rate how important, if at all, you think it is for the Corona community to focus on each of the following in the coming two years.
 (% essential or very important)

Overall economic health	93%	Similar
Overall quality of the transportation system	70%	Similar
Overall design or layout of residential and commercial areas	84%	Similar
Overall quality of the utility infrastructure	90%	Similar
Overall feeling of safety	97%	Similar
Overall quality of natural environment	80%	Similar
Overall quality of parks and recreation opportunities	81%	Similar
Overall health and wellness opportunities	77%	Similar
Overall opportunities for education, culture, and the arts	76%	Similar
Residents' connection and engagement with their community	68%	Similar

* Comparison to the national benchmark is shown. If no comparison is available, this is left blank.

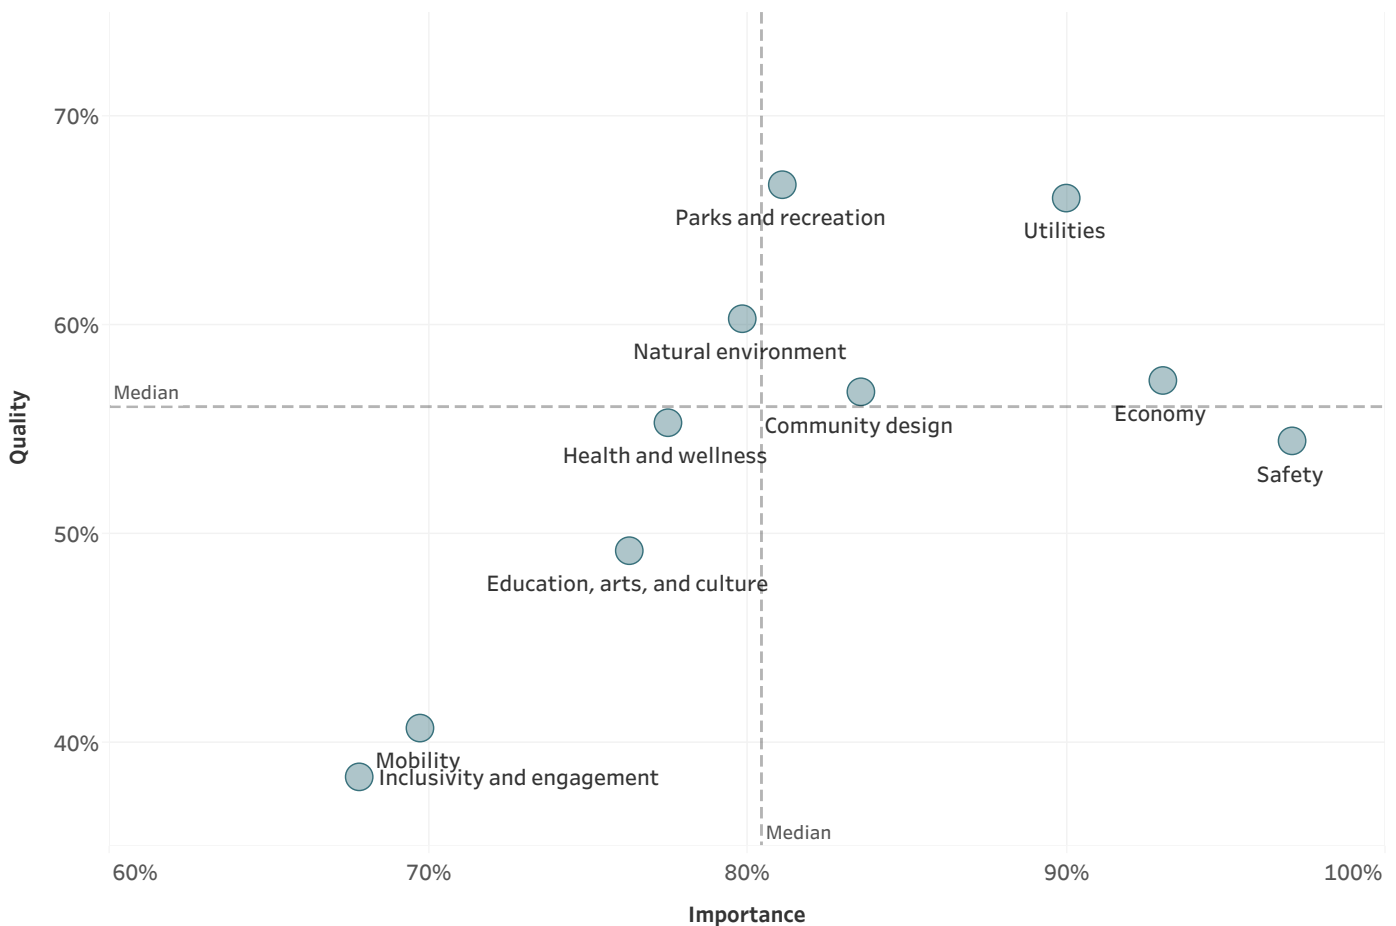

Balancing performance and importance

Every jurisdiction must balance limited resources while meeting resident needs and striving to optimize community livability. To this end, it is helpful to know what aspects of the community are most important to residents and which they perceive as being of higher or lower quality. It is especially helpful to know when a facet of livability is considered of high importance but rated as lower quality, as this should be a top priority to address.

To help guide City staff and officials with decisions on future resource allocation, resident ratings of the importance of services were compared to their ratings of the quality of these services. To identify the services perceived by residents to have relatively lower quality at the same time as relatively higher importance, all services were ranked from highest perceived quality to lowest perceived quality and from highest perceived importance to lowest perceived importance. Some services were in the top half of both lists (higher quality and higher importance); some were in the top half of one list but the bottom half of the other (higher quality and lower importance or lower quality and higher importance); and some services were in the bottom half of both lists.

Services receiving quality ratings of excellent or good by 56% or more of respondents were considered of “higher quality” and those with ratings lower than 56% were considered to be of “lower quality.” Services were classified as “more important” if they were rated as essential or very important by 80% or more of respondents. Services were rated as “less important” if they received a rating of less than 80%. This classification uses the median ratings for quality and importance to divide the services in half.

The quadrants in the figure below show which community facets were given higher or lower importance ratings (right-left) and which had higher or lower quality ratings (up-down). Facets of livability falling closer to a diagonal line from the lower left to the upper right are those where performance ratings are more commensurate with resident priorities. Facets scoring closest to the lower right hand corner of the matrix (higher in importance and lower in quality) are those that may warrant further investigation to see if changes to their delivery are necessary to improve their performance. This is the key part of this chart on which to focus. Facets falling in the top left hand corner of the chart (lower in importance but higher in quality) are areas where performance may outscore resident priorities, and may be a consideration for lower resource allocation.

Quality of life

Measuring community livability starts with assessing the quality of life of those who live there, and ensuring that the community is attractive, accessible, and welcoming to all.

The overall quality of life in Corona

Please rate each of the following aspects of quality of life in Corona.
(% excellent or good)

		vs. benchmark*
Corona as a place to live	83%	Similar
The overall quality of life	72%	Similar

Please indicate how likely or unlikely you are to do each of the following.
(% very or somewhat likely)

Remain in Corona for the next five years	81%	Similar
Recommend living in Corona to someone who asks	81%	Similar

Please rate each of the following in the Corona community.
(% excellent or good)

Overall image or reputation	57%	Lower
-----------------------------	-----	-------

* Comparison to the national benchmark is shown. If no comparison is available, this is left blank.

Governance

Strong local governments produce results that meet the needs of residents while making the best use of available resources, and are responsive to the present and future needs of the community as a whole.

Overall confidence in Corona government

Please rate the quality of each of the following services in Corona.
(% excellent or good)

		vs. benchmark*
Overall customer service by Corona employees	67%	Similar
Public information services	56%	Similar

Please rate the following categories of Corona government performance.
(% excellent or good)

Treating residents with respect	55%	Similar
The overall direction that Corona is taking	51%	Similar
Treating all residents fairly	51%	Similar
Being honest	46%	Similar
Generally acting in the best interest of the community	44%	Similar
Being open and transparent to the public	43%	Similar
The value of services for the taxes paid to Corona	43%	Similar
Informing residents about issues facing the community	41%	Similar
The job Corona government does at welcoming resident involvement	40%	Similar
Overall confidence in Corona government	40%	Similar

Overall, how would you rate the quality of the services provided by each of the following?
(% excellent or good)

The City of Corona	62%	Similar
The Federal Government	31%	Similar

* Comparison to the national benchmark is shown. If no comparison is available, this is left blank.

Economy

Local governments work together with private and nonprofit businesses, and with the community at large, to foster sustainable growth, create jobs, and promote a thriving local economy.

Overall economic health of Corona

What impact, if any, do you think the economy will have on your family income in the next 6 months? Do you think the impact will be:

Please rate each of the following aspects of quality of life in Corona. (% excellent or good)

Aspect	Percentage	vs. benchmark*
Corona as a place to work	50%	Similar
Corona as a place to visit	35%	Lower

Please rate each of the following characteristics as they relate to Corona as a whole. (% excellent or good)

Characteristic	Percentage	vs. benchmark*

	Very unlikely		26%

National benchmark tables

This table contains the comparisons of Corona’s results to those from other communities. The first column shows the comparison of Corona’s rating to the benchmark. Corona’s results are noted as being “higher”, “lower” or “similar” to the benchmark, meaning that the average rating given by Corona residents is statistically similar to or different than the benchmark. The second column is Corona’s “percent positive.” Most commonly, the percent positive is the combination of the top two most positive response options (i.e., excellent/good). The third column is the rank assigned to Corona’s rating among communities where a similar question was asked. The fourth column is the number of communities that asked a similar question. The fifth column shows the percentile for Corona’s result -- that is what percent of surveyed communities had a lower rating than Corona.

			% positive	Rank	Number of communities	Percentile
Please rate each of the following aspects of quality of life in Corona.	Corona as a place to live	Similar	83%	258	350	26
	Your neighborhood as a place to live	Similar	82%	210	302	30

Please rate your overall health.	Similar	63%	197	274	28	
What impact, if any, do you think the economy will have on your family income in the next 6 months? Do you think the impact will be:	Similar	18%	227	276	18	

Custom benchmark tables

This table contains the comparisons of Corona’s results to those from other communities in the Western United States with populations between 100,000 - 300,000 and median household salary of \$50,000 - \$150,000. The first column shows the comparison of Corona’s rating to the benchmark. Corona’s results are noted as being “higher”, “lower” or “similar” to the benchmark, meaning that the average rating given by Corona residents is statistically similar to or different than the benchmark. The second column is Corona’s “percent positive.” Most commonly, the percent positive is the combination of the top two most positive response options (i.e., excellent/good). The third column is the rank assigned to Corona’s rating among communities where a similar question was asked. The fourth column is the number of communities that asked a similar question. The fifth column shows the percentile for Corona’s result -- that is what percent of surveyed communities had a lower rating than Corona.

Shop online	Similar	64%	7	12	50
Please rate your overall health.	Similar	63%	12	14	21
What impact, if any, do you think the economy will have on your family income in the next 6 months? Do you think the impact will be:	Lower	18%	13	14	14

Complete set of frequencies

This dashboard contains a complete set of responses to each question on the survey. By default, "don't know" responses are excluded, but may be added to the table using the response filter to the right. In some tables, the percentages may not sum to 100%; this is either because the question permitted the respondent to "choose all that apply", or for a question that asked the respondent to select one answer, it is due to the customary practice of rounding values to the nearest whole number.

Please rate each of the following aspects of quality of life in Corona.	Question	Rating	Frequency	
			Percentage	Count (N)
Corona as a place to live	Corona as a place to live	Excellent	22%	N=152

	Identify in another way	 1% N=9

Methods (open participation)

As part of its participation in The National Community Survey™ (The NCST™), the City of Corona conducted a survey of 714 residents. Survey invitations were mailed to randomly selected households and data were collected from May 16th, 2022 to August 17th, 2022. The results from this main survey effort represent the most robust estimate of your residents’ opinions.

After the above data collection period was underway, a link to an online open participation survey was publicized by the City of Corona. The open participation survey was identical to the probability sample survey with two small updates it included a map at the beginning asking where the respondent lives and also a question about where they heard about the survey. The open participation survey was open to all city residents and became available on June 20th, 2022. The survey remained open for 8 weeks and there were 310 responses.

The open participation survey data were not collected through a random sample and it is unknown who in the community was aware of the survey; therefore, a level of confidence in the representativeness of the sample cannot be estimated. However, to reduce bias where possible, these data were statistically weighted to match the demographic characteristics of the 2010 Census and 2020 American Community Survey estimates for adults in the City of Corona. The characteristics used for weighting were age, sex, race, Hispanic origin, housing type, housing tenure, and area. No adjustments were made for design effects. Weights were calculated using an iterative, multiplicative raking model known as the ANES Weighting Algorithm.* The results of the weighting scheme for the open participation survey are presented in the following table.

* Pasek, J. (2010). ANES Weighting Algorithm. Retrieved from <https://web.stanford.edu/group/iriss/cgi-bin/anesrake/resources/RakingDescription.pdf>

Tenure	Own	89%	64%	64%
	Rent	11%	36%	36%

Open participation survey results

This dashboard contains a complete set of responses to each question on the open participation survey. By default, "don't know" responses are excluded, but may be added to the table using the response filter to the right. In some tables, the percentages may not sum to 100%; this is either because the question permitted the respondent to "choose all that apply", or for a question that asked the respondent to select one answer, it is due to the customary practice of rounding values to the nearest whole number.
