

# CITY OF CORONA MITIGATED NEGATIVE DECLARATION

# NAME, DESCRIPTION AND LOCATION OF PROJECT:

**PM 37221:** Parcel Map application for the subdivision of 2.065 acres into two lots for commercial purposes, located at the southwest corner of Temescal Canyon Road and Pronio Circle in the Entertainment Commercial (EC) designation of the Dos Lagos Specific Plan (SP99-03).

**PP2020-0006:** Precise Plan application for the review of two professional medical office buildings totaling 21,400 square feet, located at the southwest corner of Temescal Canyon Road and Pronio Circle in the Entertainment Commercial (EC) designation of the Dos Lagos Specific Plan (SP99-03).

### **ENTITY OR PERSON UNDERTAKING PROJECT:**

Griffin Haupert Griffco Land, LLC 2518 N. Santiago Blvd. Orange, CA 92867

The City Council, having reviewed the initial study of this proposed project and the written comments received prior to the public meeting of the City Council, and having heard, at a public meeting of the Council, the comments of any and all concerned persons or entities, including the recommendation of the City's staff, does hereby find that the proposed project may have potentially significant effects on the environment, but mitigation measures or revisions in the project plans or proposals made by or agreed to by the applicant would avoid or mitigate the effects to a point where clearly no significant effects will occur. Therefore, the City Council hereby finds that the Mitigated Negative Declaration reflects its independent judgment and shall be adopted.

The Initial Study and other materials which constitute the records of proceedings, are available at the office of the City Clerk, City of Corona City Hall, 400 South Vicentia Avenue, Corona, CA 92882.

# CITY OF CORONA INITIAL STUDY / MITIGATED NEGATIVE DECLARATION

PROJECT TITLE: Vista Dos Lagos (PM 37221 and PP2020-0006)

<u>PM 37221:</u> Parcel Map application for the subdivision of 2.065 acres into two lots for commercial purposes, located at the southwest corner of Temescal Canyon Road and Pronio Circle in the Entertainment Commercial (EC) designation (Planning Area 3) of the Dos Lagos Specific Plan (SP99-03).

<u>PP2020-0006:</u> Precise Plan application for the review of two professional medical office buildings totaling 21,400 square feet, located at the southwest corner of Temescal Canyon Road and Pronio Circle in the Entertainment Commercial (EC) designation (Planning Area 3) of the Dos Lagos Specific Plan (SP99-03).

**PROJECT LOCATION:** Southwest corner of Pronio Circle and Temescal Canyon Road (APN 279-460-074) in the Entertainment Commercial (EC) designation (Planning Area 3) of the Dos Lagos Specific Plan (SP99-03).

PROJECT PROPONENT: Griffin Haupert

Griffco Land, LLC 2518 N. Santiago Blvd. Orange, CA 92867

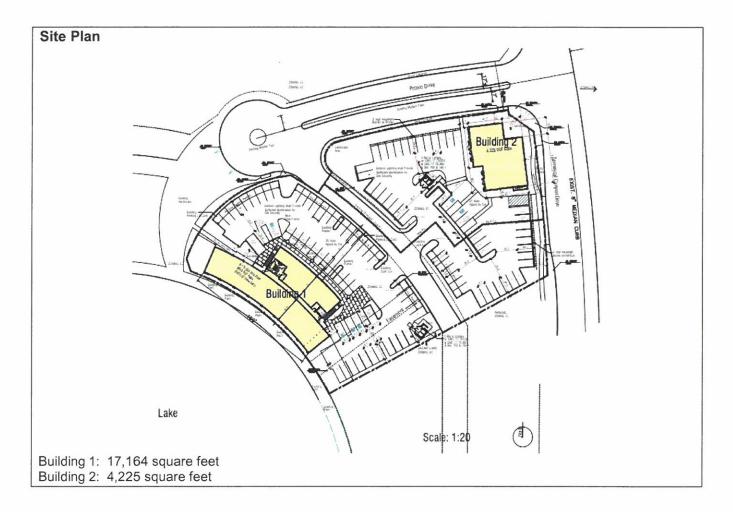

### PROJECT MAP:

### PROJECT DESCRIPTION:

The project is for the development of two new medical office buildings proposed on 2.065 acres in Planning Area 3 of the Dos Lagos Specific Plan (SP-99-03). The site is zoned Entertainment Commercial (EC) per the specific plan land use map, which permits medical office uses by right.

The project requires two applications: Parcel Map 37221 and Precise Plan 2020-0006. The parcel map, PM 37221, is a proposal to subdivide the project site into two parcels. Proposed Parcel 1 is 30,844 square feet and Parcel 2 is 59,125 square feet. The precise plan, PP2020-0006, is for the review of the site plan, architecture, and landscaping associated with the proposed project. Parcel 1 is to be developed with Building 1, which is a 17,164 square foot multi-unit medical office building. Parcel 2 is to be developed with Building 2, which is a 4,236 square foot standalone medical office building. The project is providing a total of 107 parking spaces, which will be shared among the tenants within the two buildings.

# ENVIRONMENTAL SETTING:

**Site Description:** Presently, the site is developed with a parking lot. The project site is part of the master planned Dos Lagos community in which the Dos Lagos Specific Plan was approved for. The Specific Plan was analyzed for potential environmental impacts in the City of Corona Annexation No. 94 & Dos Lagos EIR, which was certified on June 21, 2000. In 2003, the Specific Plan area was mass and rough graded by the master developer to enable the construction of the necessary public infrastructure to support the development planned for the area.

Abutting the east side of the project site is Temescal Canyon Road, which is fully improved with roadway pavement, curb and gutter, sidewalk, and parkway adjacent to the site. Abutting to the north is Pronio Circle, which is improved

with roadway pavement, curb and gutter adjacent to the site. Sidewalks are currently missing along Pronio Circle adjacent to the project site.

**Site Surroundings**: Located across Temescal Canyon Road to the east of the site are single family residential condominium homes. Located across Pronio Circle to the north are live/work units. Abutting to the south and west is the development of *The Shops at Dos Lagos*, a commercial lifestyle center.

### **GENERAL PLAN \ ZONING:**

The subject property is located within the Dos Lagos Specific Plan and zoned Entertainment Commercial, which permits for the use of medical offices. Therefore, the proposed project is consistent with the zoning of the project site.

The property has a General Plan designation of Mixed-Use 1 (MU1), which permits office uses. The MU1 designation establishes a Floor Area Ratio (FAR) limit of 2.0. The proposed office project has an FAR of 0.24, which does not exceed the site's FAR limit.

### STAFF RECOMMENDATION:

The City's Staff, having undertaken and completed an initial study of this project in accordance with the City's "Local Guidelines for Implementing the California Environmental Quality Act (CEQA)", has concluded and recommends the following: The proposed project could not have a significant effect on the environment. Therefore, a NEGATIVE DECLARATION will be prepared. The proposed project could have a significant effect on the environment, however, the potentially significant effects have been analyzed and mitigated to below a level of significance pursuant to a previous EIR as identified in the Environmental Checklist attached. Therefore, a NEGATIVE DECLARATION WILL BE PREPARED. The Initial Study identified potentially significant effects on the environment but revisions in the project plans or Χ\_ proposals made by or agreed to by the applicant would avoid or mitigate the effects to below a level of significance. Therefore, a MITIGATED NEGATIVE DECLARATION will be prepared. The proposed project may have a significant effect on the environment. Therefore, an ENVIRONMENTAL IMPACT REPORT is required. The proposed project may have a significant effect on the environment, however, a previous EIR has addressed only a portion of the effects identified as described in the Environmental Checklist discussion. As there are potentially significant effects that have not been mitigated to below significant levels, a FOCUSED EIR will be prepared to evaluate only these effects. There is no evidence that the proposed project will have the potential for adverse effect on fish and wildlife

resources, as defined in Section 711.2 of the Fish and Game Code.

Environmental Checklist

Environmental: PM 37221 and PP2020-0006 IS/MND Discussion: Per the city's Property Information application, there are no known active faults crossing or projecting through the site. The site is not located in an Alguist-Priolo Earthquake Fault Zone and thus, ground rupture due to faulting is considered unlikely at this site. The project will be subject to city and county local codes, the latest California Building Code (CBC), and the engineering recommendations in the project's geotechnical investigation report prepared by South Shore Testing & Environmental (December 14, 2020). Therefore, any potential impacts related to fault/seismic failures would be reduced to a less than significant impact and no further mitigation would be necessary. b. The project would involve grading of more than 100 cubic yards. Adherence to the city's grading regulations and the grading specifications identified in the geotechnical investigation report would ensure a less than significant impact would occur and no further mitigation would be required. C. The subject site is in an area containing relatively flat mass-graded terrain that is utilized as a parking lot for the adjacent manmade lakes and commercial area. Therefore, landslides and grading on over 10% slopes are not expected to be an issue. No further mitigation would be necessary. Development of the project would require the movement of on-site soils. Prior to the issuance of grading permits, the project applicant would be required to submit to the City detailed grading plans for the project site and would be required to comply with applicable city grading regulations established in the Corona Municipal Code. Furthermore, development of the site would involve more than one acre; therefore, the proposed project is required to obtain a National Pollutant Discharge Elimination System (NPDES) permit. A Storm Water Pollution Prevention Plan (SWPPP) would also be required to address erosion and discharge impacts associated with the proposed on-site grading. Additionally, the project is required to submit a final Water Quality Management Plan (WQMP) which would identify measures to treat and/or limit the entry of contaminants into the storm drain system. Since the project is required to adhere to the City's grading regulations, obtain an NPDES Permit, and prepare an SWPPP and WQMP, impacts associated with soil erosion hazards are less than significant and no mitigation is required. The site generally consists of yellowish brown gravelly silty sand. Expansion index (EI) testing was performed by South Shore Testing & Environmental on the soil samples taken from the site. The results indicated that the El for the onsite soils was an 11, which is considered to be non-expansive. Therefore, no further mitigation is warranted with respect expansive soils.

4. HYDROLOGY AND WATER QUALITY:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less than significant Impact	No Impact
a. Violate water quality standards/waste discharge requirements				$\boxtimes$
b. Deplete groundwater supplies				$\boxtimes$
c. Alter existing drainage pattern				$\boxtimes$
d. Increase flooding hazard				$\boxtimes$
e. Degrade surface or ground water quality				$\boxtimes$
f. Within 100-year flood hazard area				$\boxtimes$
g. Increase exposure to flooding				$\boxtimes$
h. Exceed capacity of storm water drainage system				$\boxtimes$
Discussion:				

# a., c., & e.

Development of the project site would increase the area of impermeable surface paving which will result in an increase in surface runoff. The applicant has submitted a preliminary Water Quality Management Plan (WQMP) prepared by Land Development Design Company, LLC. (April 17, 2019) to ensure that the project addresses potential water quality impacts. The applicant will be required to implement on site the Best Management Practices (BMPs) identified in the preliminary WQMP to minimize pollutant runoff into the City's storm water drainage system. A BMP for the project is to maintain landscaping using

City of Corona 7 Environmental Checklist

### Environmental: PM 37221 and PP2020-0006 IS/MND

minimum or no pesticides. Another BMP is to sweep sidewalks and parking areas regularly and to prevent accumulation of litter and debris. The applicant will implement underground storm water detention and infiltration systems on the north portion of the site. Prior to issuance of a grading permit, the applicant will be required to submit a final WQMP to be reviewed by the City's Land Development Division. This will result in a less than significant impact to water quality and therefore, no further mitigation is required.

b. Per the city's Draft Temescal Subbasin Groundwater Sustainability Plan (September 2020), the project site is located in the western portion of the Temescal Groundwater Basin of the Upper Santa Ana River Valley Basin. The Temescal Groundwater Basin encompasses a surface area of 23,500 acres (37 square miles) with recharge predominantly occurring from percolation of precipitation on the valley floor and infiltration of stream flow within tributaries exiting the surrounding mountains and hills. The proposed project's ability to interfere substantially with groundwater recharge lies within the installation of impermeable surfaces, which would reduce the amount of land available for groundwater recharge. Although the development of the proposed project would result in the installation of impermeable surfaces and infrastructure, the amount of land rendered impermeable by implementation of the proposed project is less than one percent of the total area of 23,500 acres of the groundwater basin's total recharge area. The project does not present a loss of permeable surface area for the Temescal Groundwater Basin, therefore, impacts associated with this topic are considered to be less than significant and no mitigation would be required. Furthermore, the project does not propose construction of wells or direct pumping of groundwater.

### f. & g

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMS), the project site is not within the 100-year or 500-year flood hazard areas. Development of the project site will not result in a flooding hazard, nor will it expose the site and surrounding area to flooding. Therefore, no impacts are anticipated with respect to flooding and no mitigation is required.

h.

The project is designed to ensure that the runoff generated by the project can be intercepted and conveyed to the existing offsite storm drain system in a safe and nondestructive manner, while adhering to regional and local design requirements, including those requirements within the project's WQMP's. Also, the proposed flows and capacities generated by the new development do not exceed the capacity of the existing stormwater system and do not increase the potential for on-site or offsite flooding. Therefore, the development of the project site would not result in exceeding the capacity of the city's storm drain system and no mitigation is warranted.

5. AIR QUALITY:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less than Significant Impact	No Impact
a. Conflict with air quality plan				$\boxtimes$
b. Violate air quality standard			$\boxtimes$

e. Create objectionable odors				$\boxtimes$

### Discussion:

An Air Quality & Greenhouse Gas Impact Study (RK Engineering Group, Inc., March 19, 2021) was prepared for the project to analyze potential air impacts associated with the proposed project. Emissions were calculated using the latest version of CalEEMod (v2016.3.2), which is a computer model approved by the South Coast Air Quality Management District (SCAQMD) to calculate criteria pollutant emissions. The following discusses the project's compliance to air quality plans and potential short-term and long-term air quality impacts.

The project site is located within the South Coast Air Basin, an area covering approximately 6,745 square miles and bounded by the Pacific Ocean to the west and south and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Basin includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. Air quality within the Basin is regulated by the SCAQMD which is required, pursuant to the federal Clean Air Act, to reduce emissions of criteria pollutants for which the Basin is in nonattainment. At the state level, air quality is regulated by the California Air Resources Board (CARB) and at the federal level it is the U.S. Environmental Protection Agency (EPA). The project would be subject to SCAQMD's Air Quality Management Plan (AQMP), which contains a comprehensive list of pollution

control strategies directed at reducing emissions and achieving ambient air quality standards. The 2016 AQMP is based on projections originating with county and city general plans. Since the proposed project is consistent with the City of Corona General Plan, the project would be consistent with the 2016 AQMP. Therefore, no impacts would occur with respect to AQMP implementation, and no mitigation measures are required.

### b. & c.

# Short-term Impacts

Construction of the project is estimated to begin in the year 2021 and expected to last approximately one year from the time permits are issued. Any project with daily regional emissions that exceed any of the regulated thresholds should be considered as having an individually and cumulatively significant air quality impact. Construction activities would include site preparation, grading, building construction, paving, and the application of architectural coatings. Construction equipment would include excavators, graders, dozers, tractors, a water truck during grading; cranes, forklifts, generators, tractors, welders during building construction; pavers, mixers, rollers and paving equipment during paving, and air compressors during architectural coatings. These activities would result in emissions of ROG, NOx, CO, SO<sub>2</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> which have regional significance thresholds established by the SCAQMD. During construction, the project is expected to comply with the regulatory construction requirements under the SCAQMD Rules. The project's estimated maximum daily construction emissions are summarized below in Table 5-A. As shown, emissions resulting from project construction would not exceed the SCAQMD regional thresholds of significance for regulated pollutants. Therefore, a less than significant impact would occur, and no mitigation is required.

TABLE 5-A
Expected Daily (Short-Term) Construction Emissions

Year	ROG	NOx	со	SO <sub>2</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>	
2020 (lb/day) Unmitigated	2.45	21.37	16.15	0.03	7.66	4.31	
2021 (lb/day) Unmitigated	21.87	17.12	15.71	0.03	1.18	0.88	
Significance Threshold (lb/day)	75	100	550	150	150	55	
SCAQMD Impact?	NO	NO	NO	NO	NO	NO

# Long-term Impacts

Long-term air quality impacts are associated with operational activities the proposed project that will result in emissions of ROG, NO<sub>X</sub>, CO, SO<sub>2</sub>, and PM<sub>10</sub>. Operational emissions would be expected from the following three sources related to the long-term operations of the proposed project:

- Mobile source emissions (project vehicle trips)
- Area source emissions (usage of natural gas, landscape equipment, and architectural coatings)
- Energy source emissions (usage of electricity and natural gas for space heating and cooling, water heating, ventilation, lighting, appliances, and electronics)

The area, energy, mobile sources are calculated using CalEEMod. CalEEMod utilized the proposed land use and then estimates worst-case air quality emissions from worst-case trip generations. Also, emissions are calculated using the State of California EMFAC (Emission Factor) 2014 model, which is built into the CalEEMod. Estimates are provided for both the Summer and Winter operational months. Shown in Table 5-B, the project's expected daily long-term emissions would not exceed the SCAQMD thresholds for ROG, NO<sub>X</sub>, CO, SO<sub>2</sub>, and PM<sub>10</sub>. Therefore, this would be less than significant, and no mitigation is required.

Table 5-B:

# d. LSTs

A Localized Significance Thresholds (LSTs) analysis was conducted for the project. LST analyses are applicable to project sites that are five acres or less per SCAQMD. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. Sensitive receptors are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of sensitive receptors are residences, schools, hospitals, and daycare centers. The California Air Regional Board (CARB), which establishes ambient air quality standards for major pollutants to protect public health, has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65 years of age, children under 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis.

Sensitive receptors near the project site include surrounding residences located north and east of the project site. In order to identify impacts to sensitive receptors, the SCAQMD recommends addressing localized significance thresholds (LSTs) for construction and operations impacts (area source only). LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAQMD provided the Final Localized Significance Threshold Methodology to assist lead agencies in analyzing localized air impacts. The SCAQMD provides the LST screening lookup tables for one, two, and five-acre projects emitting CO, NOX, PM2.5, or PM10. The LST methodology and associated mass rates are not designed to evaluate localized impacts from mobile sources traveling over the roadways. The nearest Source Receptor Area (SRA) is located 54 meters from the site.

Tables 5-C and 5-D illustrate the project's construction and operational related localized emissions and compare the results to SCAQMD 2-Acre LST Emission Thresholds. The emissions in both tables will be below the SCAQMD thresholds. However, the results assume that the project would be complying with all standard SCAQMD rules and requirements with regard to fugitive dust control. For reference, the applicable fugitive dust control measures are listed below. These are design features, which the project is required to comply with and are included in the project conditions of approval for PP2020-0006 and PM 37221. With implementation of the dust suppression techniques, the project's construction and operational impacts to localized air resources would be less than significant.

# Construction Design Features:

- 1. All active construction areas shall be watered two (2) times daily.
- 2. Speed on unpaved roads shall be reduced to less than 15 mph.
- 3. Any visible dirt deposition on any public roadway shall be swept or washed at the site access points within 30 minutes.
- 4. Any on-site stockpiles of debris, dirt or other dusty material shall be covered or watered twice daily.
- 5. All operations on any unpaved surface shall be suspended if winds exceed 15 mph.
- 6. Access points shall be washed or swept daily.
- 7. Construction sites shall be sandbagged for erosion control.
- 8. Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).
- 9. Cover all trucks hauling dirt, sand, soil, or other loose materials, and maintain at least 2 feet of freeboard space in accordance with the requirements of California Vehicle Code (CVC) section 23114.
- 10. Pave or gravel construction access roads at least 100 feet onto the site from the main road and use gravel aprons at truck exits.
- 11. Replace the ground cover of disturbed areas as quickly possible.
- 12. A fugitive dust control plan should be prepared and submitted to SCAQMD prior to the start of construction.
- 13. Prepare and implement a Construction Management Plan which will include Best Available Control Measures to be submitted to the City of Corona.
- 14. Construction equipment shall be maintained in proper tune.
- 15. All construction vehicles shall be prohibited from excessive idling. Excessive idling is defined as five (5) minutes or longer.
- 16. Minimize the simultaneous operation of multiple construction equipment units.
- 17. The use of heavy construction equipment and earthmoving activity should be suspended during Air Alerts when the Air Quality Index reaches the "Unhealthy" level.
- 18. Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.
- 19. Establish staging areas for the construction equipment that are as distant as possible from adjacent sensitive receptors (residential land uses).
- 20. Use haul trucks with on-road engines instead of off-road engines for on-site hauling.
- 21. Utilize zero VOC and low VOC paints and solvents, wherever possible.

e.
Land uses generally associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting operations, refineries, landfills, dairies, fiberglass molding facilities. The project does not contain land uses associated with emitting objectionable odors. Potential odor sources associated with the proposed project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities. However, these activities would be temporary, short-term, and intermittent in nature and would cease upon completion of the project's construction phase. Other potential odor sources associated with the project include the temporary storage of typical solid waste (refuse) associated with the project's long-term operational uses. However, it is expected that project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the project's construction and operations would be less than significant and no mitigation would be required.

6. T	RANSPORTATION/TRAFFIC:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less than Significant Impact	No Impact
a.	Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system				
b.	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)				$\boxtimes$
C.	Increase the total daily vehicle miles traveled per service population (population plus employment) (VMT/SP) above the baseline level for the jurisdiction				
d.	Cause total daily VMT within the study area to be higher than the No Project alternative under cumulative conditions				$\boxtimes$
e.	Change in air traffic patterns				$\boxtimes$
f.	Traffic hazards from design features				$\boxtimes$

The project is forecast to generate 758 net daily trips (one half arrivin 33 outbound) produced in the AM peak hour and 60 net trips (22 integrals).				nbound,
The TIA analyzed five (5) existing nearby street intersections and the intersections included the following:	project's driveway ent	rance on Pro	nio Circle. Th	he study
<ol> <li>Temescal Canyon Road at Cajalco Road</li> <li>Temescal Canyon Road at Blue Springs Drive</li> <li>Temescal Canyon Road at Pronio Circle</li> <li>Temescal Canyon Road at Lakeshore Drive</li> <li>Temescal Canyon Road at Dos Lagos Drive</li> </ol>				

In Year 2021 without project traffic conditions, the intersection at the intersection of Temescal Canyon Road and Cajalco Road is forecast to operate at an unacceptable LOS E. In same year with project traffic conditions, the LOS at the same street intersection is also forecast to operate at an unacceptable LOS E. In order to bring the operating condition of the intersection to an acceptable level of service, the developer is required to complete the following improvements: 1) install an eastbound right-turn lane overlap traffic signal, and 2) restrict the northbound U-turn movement with signage. Alternatively, the developer may pay a fair-share cost of the total cost of constructing the recommended roadway improvements, as determined by the traffic impact analysis approved by the City. The improvements are required under Conditions 37 and 38 of the Conditions of Approval for PM 37221.

- Condition 37. Prior to map recordation the developer shall pay fair share fees to the Public Works Department as determined by the Public Works Director for the cost of future improvements in accordance with City standards. These improvements shall include, but are not limited to: a 6.25% fair share contribution toward the restriping of the northbound approach as determined in the approved TIA.
- Condition 38. The developer shall comply with the approved traffic study recommendations, including the design and installation of improvements for eastbound right-turn overlap traffic signal phasing and a restricted northbound U-turn movement.

A queueing analysis was prepared for the left-turn lane at the intersection of Temescal Canyon Road and Pronio Drive. The left-turn lane has an existing vehicle storage of 135 feet. The traffic impact analysis determined that the existing storage of 135 feet is sufficient for Year 2021 with project traffic conditions.

e. The project site is located approximately 7.5 miles southeast of the Corona Municipal Airport. The proposed office buildings are no more than 34 feet in height. Because of the project site's distance from the airport and the proposed height of the buildings, the project would not impact air operations, nor would it cause change to air traffic patterns. Also, the project is not located within an airport land use compatibility zone. Therefore, no impact related to this issue would occur and no mitigation is required.

Environmental Checklist

LL&G evaluated the internal circulation in terms of vehicle-pedestrian conflicts and driveway spacing. Based on the proposed site plan, the overall layout does not create any significant vehicle-pedestrian conflict points as the parking lots are self-contained. Motorists entering and exiting the project site from the existing internal driveway will be able to do so comfortably, safely, and without undue congestion as Pronio Circle provides a circular terminus to accommodate both resident and patron traffic for proper turnaround circulation. The project site also has a secondary access from within The Shops commercial development to the south of the project. Therefore, no impacts related to traffic hazards from design features are expected.

LL&G, April 30, 2020

g.

The project design has been reviewed by the city's Fire and Police Departments for fire and emergency access; therefore no impacts are expected.

The project site is located in an area that is served by the Riverside Transit Agency (RTA) and "Corona Cruiser," a Fixed Route service by the City of Corona. The RTA's Route 206 is the nearest bus line to the project site. Route 206 runs from Corona Transit Center to Promenade Mall, and traverses the project area along Temescal Canyon Road, Cajalco Road, and Dos Lagos Drive. During the AM peak hour, there is one southbound bus, and the PM peak hour, there are two northbound buses and one southbound bus. Route 206 has a bus stop at the corner of Temescal Canyon Road and Pronio Road which is the nearest bus stop to the project site. The Corona Cruiser runs along pre-designated Blue Line and Red Line fixed routes. The Corona Cruiser has a Red Line bus stop located at the intersection of Temescal Canyon Road and Pronio. This route does not traverse any of the study intersections analyzed in this report during weekdays, but the Red Line provides service to the Shops at Dos Lagos on Saturdays via Temescal Canyon Road from the north. The project would not conflict with any of the RTA or Corona Cruiser routes. Therefore, the project would not impact alternative transportation policies and no mitigation is required.

Discussion:								
the buildings. HVAC equipr across Proni stationary no	a., b., c., & d.  Long-term noise impacts will be minimal given that the proposed use is office where all operations would be conducted inside the buildings. The long-term noise impacts associated with the project would be generated from parking lot noise, mechanical HVAC equipment, and conversation/outdoor noise. The nearest sensitive area would be the existing residential condominiums across Pronio Circle approximately 60 feet from the project site. The project is subject to the City's noise standards for stationary noise under CMC Section 17.84.040(C) shown below. Thus, the project's long-term noise would have no significant impact and no mitigation is required.  CMC Section 17.84.040(C)

Per the Riverside County Airport Land Use Compatibility Plan (ALUCP), the project site is not located in an identified airport land use compatibility zone; therefore, no impact associated within this issue would occur and mitigation is not required.

11. PUBLIC SERVICES:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less than Significant Impact	No Impac		
a. Fire protection				$\boxtimes$		
b. Police protection				$\boxtimes$		
c. Schools				$\boxtimes$		
d. Parks & recreation facilities				$\boxtimes$		
e. Other public facilities or services						
Discussion:						
The Corona Fire Department (CFD) will provide all emergency and med first response and is located on Bedford Canyon Road, near Interstat Station 7 is located approximately 1.1 miles from the project site and sho Therefore, response times to the project site will not be impacted and the fire protection facilities.	e 15, approximate ould generate quic	ely 1.1 miles fi k response tim	rom the pro	ject site oject site		
b. The City of Corona Police Department will provide patrol and emergency response to the project site. The Police Department presently has over 200 employees, including officers and support staff and is stationed at 730 Public Safety Way, which is approximately 6.15 miles from the project site. The City's police patrol officers work assigned zones throughout the city; therefore, officers responding to the project site can come from either the city's police station or from their assigned zone while on patrol. Therefore, police services are not anticipated to be impacted by the proposed project and the project does not require the construction of new police protection facilities.						
c. The proposed project is commercial and will not result in residential development that would lead to the generation of additional students. The applicant is required to pay the applicable development impact mitigation school fees. Therefore, no

City of Corona

of all necessary public water and sewer facilities needed to serve the project. All water and sewer facilities are required to be designed per the standards of the Utilities Department and Riverside County Department of Health Services and will be reviewed by the Utilities Department during the plan check process. This would reduce the impacts to less than a significant level and therefore, no further mitigation would be required.

c.
The project does not require the construction of additional storm drains or expansion of existing storm drains. The city's existing storm drains have sufficient capacity to receive flows from the project site. Therefore, no impacts are expected.

As discussed under the Hydrology and Water Quality section, a preliminary WQMP was prepared for the project. As part of the project's grading permit process, the applicant is required to submit a final WQMP and the city's Public Works inspector also inspects the project site for compliance with the final approved WQMP during the on-site grading process and at time of project completion. Therefore, the project would not impact water quality or violate water quality standards and no mitigation is required.

### f. & g.

Waste Management (WM) is contracted by the City of Corona as the sole hauler of solid waste and provider of recycling services. WM provides refuse collection to residential, commercial, and industrial customers. Based on the solid waste generation identified in Table 12-A, solid waste from the project would be transported to the El Sobrante landfill located at 10910 Dawson Canyon in Corona. The El Sobrante landfill accepts a maximum 16,054 tons of waste per day and has a remaining capacity of 143,977,170 tons and an estimated closure date of 2051.

TABLE 12-A

Landfill	Location	Remaining Capacity (cubic yards)	Estimated Closure Date	Maximum Daily Permitted Tonnage	Actual Average Daily Disposal, tons <sup>3</sup>	Residual Disposal Capacity, tons per day

Source: Table 5.19-10 Environmental Analysis – Utilities and Service System - Solid Waste of General Plan Technical Update of Corona General Plan Final Environmental Impact Report,
December 2019

Per the General Plan Technical Update EIR, the County of Riverside is required to maintain 15 years identified disposal capacity or have a plan to transform or divert its waste, pursuant to AB 939. There is adequate landfill capacity in the region for solid waste that would be generated by the 2020-2040 General Plan buildout. Furthermore, new developments approved by the City would be required to contain storage areas for recyclable materials in conformance with California Public Resources Code Sections 42900 et seq., and the City of Corona Municipal Code Chapter 8.20 (Collection of Refuse and Recyclable Materials). Solid waste diversion program would continue operating and would have adequate capacity to accept all future wastes and recyclables to reduce landfilled waste. Additionally, solid waste service fees would be charged to individual property owners when services are initiated to offset operation costs associated with solid waste collection and disposal. Therefore, the project is anticipated to create a less than significant impact to landfill capacity and no mitigation would be required.

City of Corona 20 Environmental Checklist

site would contain historical, archaeological, or paleontological resources. Also, per the paleontological resources study conducted for the project site by Cogstone (March 2016), no fossils were observed on the site during Cogtone's field survey.

Environmental:	PM 37221	and PP2020	-0006 IS/MND
----------------	----------	------------	--------------

However, if unanticipated fossils are unearthed during construction, work should be halted in that area until a quantified paleontologist can assess the significance of the find. Work may resume immediately at a minimum of 50 feet away from the find. Also, the project is required to comply with Mitigation Measure 7 under the Tribal Cultural Resources section, which addresses the disturbance of human remains. Compliance with these requirements would reduce impacts to cultural resources to less than significant. (MM 14-A and MM 17-F)

# Mitigation Measure:

MM 14-A

If unanticipated fossils are unearthed during construction, work should be halted in that area until a qualified paleontologist can assess the significance of the find. Work may resume immediately at a

minimum of 50 feet away from the find.							
15. AGRICULTURE RESOURCES:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less than Significant Impact	No Impact			
a. Williamson Act contract				$\boxtimes$			
b. Conversion of farmland to nonagricultural use				$\boxtimes$			
Discussion:							
a. The California Land Conservation Act of 1965, commonly referred to as enter into contracts with private landowners for the purpose of restricting space use. In return, landowners receive property tax assessments who based upon farming and open space uses as opposed to full market value owners to continue to farm their land, and to prevent the premature convent located within a Williamson Act contract area. Therefore, no impact to development and no mitigation is required.  b. The project site is not a designated farmland per the farmland maps comparted the farmland Mapping and Monitoring Program (FMMP). For this reason, do conversion of farmland to nonagricultural uses; therefore, there would be	specific parcels of hich are much low ue. The purpose of ersion of farmland to Williamson Act apiled by the Califo evelopment of the	f land to agriculater than norm of the Act is to did to urban used lands will resultants Department of project site w	al because al because encourage s. 16. GREENHOUSE GAS:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less than Significant Impact	No Impact			
a. Generate greenhouse gases				$\boxtimes$			
b. Conflict with a plan, policy or regulation				$\boxtimes$			
Discussion:  a. & b.  The City of Corona adopted the City of Corona Climate Action Plan ( Emissions CEQA Thresholds and Screening Tables to determine whether greenhouse gas emissions. The screening tables are to provide guidance and construction measures incorporated into development are incorporated.	er or not a project e in measuring Gh	would have a s IG reductions a	significant ir attributable t	npact on to certain			

design and construction measures incorporated into development projects. Projects that garner at least 100 points will be consistent with the reduction quantities anticipated in the City's CAP and would thus be considered less than significant. Utilizing the screening tables would also allow the City to meet its GHG emissions target for year 2020.

Per the CAP, small projects that are expected to emit GHG emissions that are less than 3,000 MtCO2e (metric tons of CO2e equivalent) are not required to utilize the screening tables as they would be expected to have a less than significant individual and cumulative impact for GHG emissions. Office projects that typically emit more than 3,000 MtCO<sub>2</sub>e would need to have a building area of at least 162,000 square feet. Since the proposed office project's total building area is 21,400 square feet, it is anticipated that the project's GHG emissions would be less than 3,000 MtCO2e. Therefore, the project would not need to utilize the CAP's screening tables as no impacts are expected. The project would be in compliance with the CAP and no mitigation would be required.

En	vironmental: PM 37221 and PP2020-0006 IS/MND							
17.	TRIBAL CULTURAL RESOURCES	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less than Significant Impact	No Impact			
a.	Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or							
b.	A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe							
Dis	cussion:		2					
	a.  The project is not located on the California Register of Historical Resources or on the City's register of historic resources and would have no impacts to the state's or city's historic resources.							
put pot not	e project is subject to tribal consultation under AB 52. The purpose of AB 50 plic agencies, and project components have information available, early ential adverse impacts to tribal cultural resources. The Planning and De ifying the local Native American tribes of the proposed project through a landing and Development Department received written responses from the	in the plannin evelopment De letter of transm	ng process to i epartment init nittal dated Oc	dentify and ated the pr tober 12, 20	address ocess by 020. The			

Band of Luiseño Indians requesting consultation on the project. Consultation was held between the Planning and Development Department staff and Cheryl Madrigal, representative of Rincon Band of Luiseño Indians Soboba Tribe on January 6, 2021, and February 25, 2021. On March 4, 2021, Ms. Madrigal closed

consultation because the project was already analyzed in the Dos Lagos Environmental Impact Report (EIR).

On January 7, 2021, consultation began with Jessica Valdez, representative for the Soboba Band of Luiseno Indians and continued until March 6, 2021. There was no further response from the tribe until Joseph Ontiveros, representative for the Soboba Tribe, responded for Ms. Valdez on August 12, 2021, requesting to continue the consultation process. Mr. Ontiveros expressed concerns with the site potentially containing tribal cultural resources due to the site being located in the vicinity of other identified tribal cultural resources, and thus, requested tribal monitoring in order to reduce impacts to tribal cultural resources. Mitigation Measures 17-A through 17-G would reduce impacts to less than significant. (Mitigation Measures 17-A through 17-G)

### Mitigation Measures

- Tribal Monitoring: Prior to the issuance of a grading permit, the applicant shall contact the consulting Native MM 17-A American Tribe(s) that have requested monitoring through consultation with the City during the AB 52 process, as applicable. The applicant shall coordinate with the Tribe(s) to develop a Tribal Monitoring Agreement(s). A copy of the signed agreement shall be provided to the City of Corona Community Development Department prior to the issuance of a grading permit.
- MM 17-B Archaeological Monitoring: At least 30-days prior to application for a grading permit and before any grading, excavation and/or ground disturbing activities on the site take place, the Project Applicant shall retain a Secretary of Interior Standards qualified archaeological monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources.
  - The Project Archaeologist, in consultation with interested tribes, the Developer and the City, shall develop an Archaeological Monitoring Plan to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. Details in the Plan shall include:
    - Project grading and development scheduling; i.
    - The development of a rotating or simultaneous schedule in coordination with the applicant and the Project Archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling,

safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all Project archaeologists;

- iii. The protocols and stipulations that the Developer, City, Tribes and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources' evaluation.
- MM 17-C Treatment and Disposition of Cultural Resources: In the event that Native American cultural resources are inadvertently discovered during the course of grading for this Project, construction activities shall cease around the cultural resources until it is assessed. Monitored grading activities may continue to occur around the cultural resource; however, no grading shall occur within 50 to 100 feet around the cultural resource, as determined by the Project Archaeologist and Tribal Monitors. The following procedures will be carried out for treatment and disposition of the discoveries:
  - a. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location onsite or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process; and
  - b. **Treatment and Final Disposition:** The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Planning and Development Department with evidence of same:
    - Accommodate the process for onsite reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed;
    - ii. A curation agreement with an appropriate qualified repository within Riverside County that meets federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation;
    - iii. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, they shall be curated at the Western Science Center by default; and
    - iv. At the completion of grading, excavation and ground disturbing activities on the site a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project Archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City of Corona, Eastern Information Center and interested tribes.
- MM 17-D For final disposition of archaeological material that is non-Native American in origin, the landowner shall relinquish the archaeological material to an appropriate qualified repository with Riverside County that meets federal standards per 36 CFR Part 79 to be professionally curated and made available to other archaeologists/researchers for further study.
- MM 17-E Sacred Sites: All sacred sites, should they be encountered within the project area, shall be avoided and preserved as the preferred mitigation, if feasible.
- MM 17-F Discovery of Human Remains: In the event that human remains (or remains that may be human) are discovered at the project site during grading or earthmoving, the construction contractors, project archaeologist, and/or designated Native American Monitor shall immediately stop all activities within 100 feet of the find. The project proponent shall then inform the Riverside County Coroner and the City of Corona Community and Development Department immediately, and the coroner shall be permitted to examine the remains as required by

California Health and Safety Code Section 7050.5(b). Section 7050.5 requires that excavation be stopped in the vicinity of discovered human remains until the coroner can determine whether the remains are those of a Native American. If human remains are determined as those of Native American origin, the applicant shall comply with the state relating to the disposition of Native American burials that fall within the jurisdiction of the NAHC (PRC Section 5097). The coroner shall contact the NAHC to determine the most likely descendant(s). The MLD shall complete his or her inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. The Disposition of the remains shall be overseen by the most likely descendant(s) to determine the most appropriate means of treating the human remains and any associated grave artifacts.

The specific locations of Native American burials and reburials will be proprietary and not disclosed to the general public. The locations will be documented by the consulting archaeologist in conjunction with the various stakeholders and a report of findings will be filed with the Eastern Information Center (EIC).

According to California Health and Safety Code, six or more human burials at one location constitute a cemetery (Section 8100), and disturbance of Native American cemeteries is a felony (Section 7052) determined in consultation between the project proponent and the MLD. In the event that the project proponent and the MLD are in disagreement regarding the disposition of the remains, State law will apply and the median and decision process will occur with the NAHC (see Public Resources Code Section 5097.98(e) and 5097.94(k)).

- MM 17-G Paleontological Resources and Fossil Specimens: In the event that fossils are inadvertently discovered during the course of grading for this Project, the following procedures shall be carried out:
  - a. The applicant shall immediately cease operation and retain a qualified and trained paleontologist. The paleontologist shall salvage all fossils in the area and provide additional field staff in accordance with modern paleontological techniques.
  - b. All fossils collected during the project will be prepared to a reasonable point of identification. Excess sediment or matrix will be removed from the specimens to reduce the bulk and cost of storage. Itemized catalogs of material collected and identified will be provided to the museum repository along with the specimens.

18. MANDATORY FINDING OF SIGNIFICANCE:	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less than Significant Impact	No Impact
a. Fish/ wildlife population or habitat or important historical sites			$\boxtimes$	
b. Cumulatively considerable impacts			$\boxtimes$	
c. Substantial adverse effects on humans			$\boxtimes$	
d. Short-term vs. long-term goals			$\boxtimes$	

### Discussion:

a., b., c., & d.

Based on the Initial Study, development of the proposed project would have either no impact, or potential effects of the proposal are substantiated at or mitigated to levels below thresholds of significance. Based on the analysis presented in the preceding checklist, the project has the potential to result in significant impacts under the following environmental topics:

- Noise
- · Cultural Resources; and
- Tribal Cultural Resources.

However, appropriate mitigation measures have been developed. **Mitigation Measures 10-A through 17-G** successfully mitigate all identified potential impacts to less than significant levels. Therefore, project impacts to fish/wildlife population or habitat, important historical sites, cumulatively considerable impacts, substantial adverse effects on humans, or short-term vs. long-term goals are considered less than significant.

Environmental: PM 37221 and PP2020-0006 IS/MND No Impact Potentially Potentially Less than Significant Significant Significant Unless Impact Impact 19. WILDFIRE: Mitigation Incorporated Substantially impair an adopted emergency response plan or emergency evacuation plan X Due to slope, prevailing wind, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from  $\boxtimes$ wildfire or the uncontrolled spread of a wildfire Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water resources, power lines or other X utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope  $\boxtimes$ instability or drainage changes Discussion a. & b. The project site is not located within a high fire hazard severity zone. The project site is also not adjacent to other properties that are within a high fire hazard severity zone. There are no slopes, prevailing winds, or other factors that would exacerbate wildlife risks and expose project occupants to pollutant concentrations from wildlife. Therefore, no impacts are expected as it relates to wildfire. The properties to the south and west have also been developed for commercial purposes and developed to commercial standards that include paved concrete surfaces, paved access and commercial buildings. The proposed commercial buildings will also be constructed in accordance with the California Building Standards Code and California Fire Code which will require adequate fire suppression measures such as fire sprinklers and adequate water pressure for fire hydrants serving the project. Therefore, no impacts are expected. C. Paved roadway access is provided to the project from two public streets, Temescal Canyon Road and Pronio Circle. A secondary access is provided at the south perimeter of the project site via an existing connection to the existing restaurant parking area within The Dos Lagos Shops commercial development south of the project site. Therefore, the site has adequate access in the event to an evacuation or fire-related emergency. The project site is relatively flat and completely surrounded by urban development. The site has no significant slopes nor is it located nearby any slopes. The site is also not located in a downstream flood area. Therefore, development of the project would not expose people or structures to risks related to landslides or flooding that could occur post-fire. No impacts are expected. Potentially Potentially Less than No Impact Significant Significant Significant Impact Unless Impact 20. ENERGY: Mitigation Incorporated П  $\boxtimes$ Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation  $\boxtimes$ Conflict with or obstruct a state or local plan for renewable energy or energy efficiency Discussion: a. & b. During construction, the proposed project would result in energy consumption through the combustion of fossil fuels in

construction vehicles, worker commute vehicles, and construction equipment, and the use of electricity for temporary buildings, lighting, and other sources. Fossil fuels used for construction vehicles and other energy-consuming equipment would be used

during site preparation, grading, paving, and building construction. The types of equipment could include gasoline- and diesel-powered construction and transportation equipment, including trucks, tractors, loaders, backhoes, excavators, graders, bulldozers, rollers, forklifts, and cranes.

Other equipment could include construction lighting, field services (office trailers), and electrically driven equipment such as pumps and other tools. Singlewide mobile office trailers, which are commonly used in construction staging areas, generally range in size from 160 square feet to 720 square feet. A typical 720-square-foot office trailer would consume approximately 9,700 kilowatt-hour (kWh) during the approximately 1.1-year construction period. Due to the temporary nature of construction and the financial incentives for developers and contractors to use energy consuming resources in an efficient manner, the construction phase of the proposed project would not result in wasteful, inefficient, and unnecessary consumption of energy. Therefore, the construction related impacts related to electricity and fuel consumption would be less than significant and no mitigation is required.

The proposed project will not conflict with or obstruct a State or Local plan for renewable energy or energy efficiency. The project would result in energy consumption through the combustion of fossil fuels in construction vehicles, worker commute vehicles, and construction equipment, and the use of electricity for temporary buildings, lighting, and other sources. California Code of Regulations Title 13, Sections 2449 and 2485, limit idling from both on-road and off-road diesel-powered equipment and are enforced by California Air Resources Board. The project would comply with these regulations. There are no policies at the local level applicable to energy conservation specific to the construction phase. Thus, it is anticipated that construction of the proposed plan would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. Therefore, construction-related energy plan consistency impacts would be less than significant, and no mitigation is required.

California's Renewables Portfolio Standard (RPS) requires that 33 percent of electricity retail sales be served by renewable energy sources by 2020. The proposed project would be served with gas provided by SoCalGas. SoCalGas offers renewable natural gas captured from sources like dairies, wastewater treatment plants and landfills. The proposed project would be served with electricity provided by Southern California Edison (SCE). SCE's 2017 power mix included 32 percent eligible renewable (biomass and biowaste, geothermal, eligible hydroelectric, solar, and wind), 34 percent unspecified sources of power, 20 percent natural gas, 8 percent large hydroelectric, and 6 percent nuclear. SCE also offers a Green Rate 50 percent option that sources 66 percent of its power mix from eligible renewable energy sources, and a Green Rate 100 percent option that sources 100 percent of its power mix from eligible renewable energy sources. SCE is on track to meet the California RPS of 33 percent by 2020 mandate.

Part 11, Chapter 5, of the State's Title 24 energy efficiency standards establishes mandatory measures for non-residential buildings, including material conservation and resource efficiency. The project would be required to comply with these mandatory measures. The project would also comply with the California Building Standards Code requiring proposed commercial buildings to be solar ready. Policy IU-7.7 encourages the reduction of energy consumption through passive solar building orientation as well as the installation of rooftop solar energy systems and energy-efficient technologies. The proposed project would be encouraged to comply with this policy. Other policies that promote energy conservation at the local level are voluntary. Compliance with the aforementioned mandatory measures would ensure that the proposed project would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing energy use or increasing the use of renewable energy. Therefore, operational energy efficiency and renewable energy standards consistency impacts would be less than significant, and no mitigation is required.

# 21. PREVIOUS ENVIRONMENTAL ANALYSIS:

Earlier analysis may be used when one or more of the environmental effects have been adequately analyzed in an earlier EIR or Negative Declaration (Section 15063).
