AGENDA REPORT REQUEST FOR CITY COUNCIL ACTION

DATE: 08/05/2020

TO: Honorable Mayor and City Council Members

FROM: Community Development Department

SUBJECT:

City Council consideration of CUP2019-0006, a Conditional Use Permit (CUP) application to establish a 3,596 square foot self-serve carwash for Quick Quack on 0.98 acres located on the north side of Parkridge Avenue and west of Main Street in the Commercial Retail (CR) District of the North Main Street Specific Plan. (Applicant: Chris Costanzo, Costanzo Investments, LLC.)

RECOMMENDED ACTION:
That the City Council:

- a. Take no action, thereby affirming the Planning and Housing Commission's action granting CUP2019-0006, based on the findings contained in the staff report and conditions of approval.

OR

- b. Set the item for review at a subsequent meeting.

ANALYSIS:

Conditional Use Permit 2019-0006 (CUP2019-0006) is an application to establish a 3,596 square foot self-serve carwash with a drive-through wash tunnel and vacuum stalls for Quick Quack. The project site is 0.98 acres and is part of a proposal for a new commercial center on 4.49 acres located on the west side of Main Street and north of Parkridge Avenue. The zoning of the project site is Commercial Retail (CR) of the N. Main Street Specific Plan (SP99-01) and the General Plan designation is General Commercial (GC).

Site plan

The site plan for the proposed carwash is shown in conjunction with other commercial buildings proposed as part of the new commercial center. The carwash site will occupy 0.98 acres of a 4.49-acre commercial site that also includes two additional freestanding buildings for restaurants. The two other buildings are 3,791 square feet and 5,182 square feet in size. These buildings are located to the east and north of the car wash pad and will share driveway access into the center and parking. The carwash pad is adjacent to street frontage on Parkridge Avenue. The carwash tunnel and building is 3,596 square feet and set back 57 feet from the property line along Parkridge Avenue meeting the minimum 10-foot building setback requirement of the specific plan. Access into the carwash originates from a drive-through lane opening on the northeast side of the building that eventually transitions into a dual drive-through lane that wraps around the back of the building before entering the wash tunnel through a single entrance. Upon exiting the tunnel, patrons have the option of using one of the 14 vacuum stalls provided on the site or can immediately exit off the site. The vacuum stalls will be covered by canopies to provide shade for vehicles.

The drive-through lanes accommodate a total stacking of 18 vehicles from the drive-through entrance to the carwash order boards, exceeding the municipal code requirement of at least one stacking space before the tunnel.

The business intends to operate seven days a week between the hours of 7:00 a.m. and 9:00 p.m. during summer and 7:00 a.m. and 7:00 p.m. during winter.

Architecture

The North Main Street Specific Plan encourages diversity of form and design between buildings. The exterior design for the Quick Quack carwash building includes durable construction materials that withstand moisture. The primary building material is concrete masonry, stone veneer finish for the wainscot, and a plaster exterior applied along the upper portion of the building. The architecture also includes arcades and parapet walls that help create a varied roofline, stone veneer columns, and metal canopies. The vacuum canopies have a solid cover constructed of standing seam metal material, and the posts will be painted to match the cover. The overall design is compatible with the other buildings that are proposed on the same site and conforms to the architectural guidelines of the North Main Street Specific Plan for commercial development in terms of materials, colors, and overall design.

Access, Circulation, And Parking

Vehicular access to the commercial site will be provided from Parkridge Avenue and Main Street via a 30-foot wide driveway proposed at each street frontage. Both driveways will have full turn-movements from the streets. Main Street has a two-way left-turn center lane that will allow for left turns in and out of the project site. Parkridge Avenue will be restriped to include a left-turn pocket in the center lane in front of the project driveway to allow for left turns into the project site. Left turns out of the project site will also be allowed on Parkridge Avenue.

The internal circulation consists of a central 30-foot wide drive aisle that extends from the Parkridge entrance to the Main Street entrance which will provide access to each parcel within the site. The access and drive aisles will be shared among the businesses who will be occupying the site.

Per Corona Municipal Code (CMC) Section 17.76.030, self-serve carwashes are required to provide a minimum of two parking spaces. The carwash site provides four parking spaces. This is in addition to the 14 vacuum stalls provided on the site.

Landscaping

The development's overall conceptual landscaping includes a variety of drought tolerant trees, shrubs, and groundcover that not only enhance the site but are also functional. Accent palm trees will be installed along both street frontages while the parking lots will have canopy type trees for shade, and the buildings will be enhanced with accent trees. The on-site landscaping overall complies with the CMC and North Main Street Specific Plan for commercial developments.

Signage

The North Main Street Specific Plan permits commercial centers that are less than 15 acres in size to have one pylon per street frontage. Each pylon sign is allowed a maximum sign height of 30 feet, maximum sign width of 15 feet, and a maximum sign area of 220 square feet, which applies to the entire sign structure and not just the message area. One 20-foot high double-sided pylon sign with an overall size of 200 square feet is proposed on the Main Street frontage. A second identical sign is proposed on the Parkridge Avenue frontage. Each sign contains four tenant panels to accommodate the future users of the buildings. The sign cabinets will be internally illuminated during the nighttime hours. To reduce glare during the nighttime, the sign is conditioned to have an automatic nighttime dimmer installed.

Public Improvements

The project site is associated with Parcel Map 37747, which is being reviewed in conjunction with this CUP. PM 37747 creates the 0.98 acres for the carwash site in addition to two other parcels for the two additional buildings planned within the commercial center. Therefore, the public improvements required along Main Street and Parkridge Avenue adjacent to the overall 4.49 acres will be done simultaneously. Main Street along the commercial center's frontage is required to be widened by 20 feet to provide an overall right-of-way width of 100 feet, which includes 80 feet of paved roadway from curb to curb and parkways on both sides of the street. This widening will allow the construction of a third southbound lane on Main Street as this section of the street currently has only two southbound lanes. The required improvements include approximately 16 feet of paved roadway, curb and gutter, and a 10-foot wide parkway which includes a 6-foot wide sidewalk and tree wells.

The section of Parkridge Avenue along the center's frontage is required to be widened by 14 feet to

provide an overall right-of-way width of 88 feet which shall include 64 feet of paved roadway from curb to curb. This widening will allow for the construction of an additional westbound lane on Parkridge Avenue as this section of the street currently has only one westbound lane. The required improvements include 23 feet of paved roadway, curb and gutter, and a 12-foot wide landscape parkway which includes a 6-foot wide sidewalk.

Additionally, the applicant is required to repave portions of Main Street to the satisfaction of the Public Works Department where trenching will occur for the installation of the 8-inch sewer line and water line within Main Street.

Also, a left-turn pocket is being added just beyond the intersection of Parkridge Avenue/Cota Street to allow a left-turn onto the project site and the turn lanes on Parkridge Avenue/Main Street will be lengthened to accommodate more vehicle stacking space.

- The southbound left-turn pocket on Main Street at Parkridge Avenue is being increased from 105 feet to 220 feet in length to accommodate more stacking of vehicles.
- The eastbound left-turn pocket on Parkridge Avenue at Main Street will be increased from 85 feet to 230 feet in length to accommodate more stacking of vehicles.
- The westbound left-turn pocket on Parkridge Avenue at Main Street will be increased from 90 feet to 115 feet in length to accommodate more stacking of vehicles.

Traffic Impact Study

A Traffic Impact Study (TIS) was prepared by LSA Associates (June 2020) to analyze the traffic generated by the entire commercial development proposed on the 4.49 acres, which included the project site for the carwash. The commercial center project was exempted from performing a Vehicle Miles Traveled (VMT) analysis because the project is considered a local-serving retail project that has less than 50,000 square feet of total building area.

The land uses anticipated on the 4.49 acres are expected to generate 2,356 total daily vehicle trips, with 40 total trips in the A.M. peak hour and 189 total trips in the P.M. peak hour. The intersections and roadway segments analyzed in the study are expected to operate at a satisfactory Level of Service (LOS) D or above at the time the project is in operation which is anticipated to be year 2021. The City's General Plan considers collector, secondary, and major arterials that operate at LOS D or above as acceptable level of service. The analysis took into consideration the roadway improvements that will be completed as part of the project including the widening of Main and Parkridge adjacent to the project site.

A drive-through stacking analysis was also done as part of the study for the carwash. Weekday and weekend stacking counts were collected from a similar sized Quick Quack carwash facility located in the City of Moreno Valley. The stacking counts were collected on two typical weekdays (July 9 and 10, 2019) and two typical weekends (July 13 and 20, 2019) during the hours of operation of the facility between 7 a.m. and 9 p.m. The data was collected at five-minute intervals. The maximum queue observed was 8 vehicles on a typical weekday (both July 9 and 10) and 10 vehicles on a typical weekend (July 13). The proposed site plan for Quick Quack in Corona provides an approximate queuing space for 18 vehicles in the drive-through lane. Therefore, sufficient on-site vehicle queue storage is provided in the drive-through lane for the new Quick Quack facility on the

project site.

Consistency with the General Plan

The carwash is consistent with the General Commercial designation of the General Plan that is established on the project site, which is intended for general commercial type uses. Also, the proposed use is consistent with the General Plan land use goal and policies established for the North Main Street area because it contributes to the revitalization and enhancement of the North Main Street corridor as a vital center for professional offices, entertainment, and retail activity with supportive commercial uses.

COMMITTEE ACTION:

Not applicable.

STRATEGIC PLAN:

Not applicable.

FISCAL IMPACT:

The applicant paid \$6,547.00 in application processing fees for the Conditional Use Permit.

ENVIRONMENTAL ANALYSIS:

The project is categorically exempted from the California Environmental Quality Act (CEQA) because it qualifies as a Class 32 Infill Development project under Section 15332 of the CEQA Guidelines. The project qualifies as an exemption from CEQA because it is consistent with the project site's General Commercial designation of the General Plan and Commercial Retail zoning, is less than five acres, has no value as habitat for endangered, threaten, or rare species, and would not result in any significant impacts relating to traffic, air, water quality, and noise, and the site can be adequately served by all required utilities and public services. Therefore, a Notice of Exemption was prepared.

PLANNING AND HOUSING COMMISSION ACTION:

At its meeting of July 6, 2020, the Planning and Housing Commission considered the subject matter and took the following action:

Motion was made, seconded (Jones/Hooks) and carried unanimously, that the Planning and Housing Commission adopt Resolution No. 2543 granting CUP2019-0006, based on the findings contained in the staff report and conditions of approval. The minutes of the Planning and Housing Commission meeting are included as Exhibit 4.
